## International Subsea Technology Conference

### Subsea Future - leveraging innovation and industrialization

At UTC 2011 you will have the possibility to meet key note speakers giving their comments on today's situation in the subsea field of the petroleum industry. You will be able to choose from more than 30 technical presentations and visit an exhibition exclusive to subsea related companies. Delegates at UTC are executives, managers, engineers and other strategic and planning personnel related to the subsea field of the petroleum industry.

*"The future of the subsea industry depends more on how to incorporate good ideas into common work practice than merely on being a site for innovative performance."*

**Subsea Chief Engineers Challenges** is a special new feature at the Underwater Technology Conference. During this session, subsea chief engineers from different operators will name and discuss their main challenges, with the hope of inspiring the audience to create solutions for the future.

The first Underwater Technology Conference was held in 1980. It was an immediate success and the Conference in 2011 will be the 17th UTC. The subsea conference in Bergen has a well known history of presenting highly competent speakers on current and important topics regarding the subsea industry. UTC has over the years become one of the largest international forums and meeting grounds for the Subsea environment. UTC is a widely recognized conference which attracts participants from all parts of the international petroleum community. More than 600 delegates and 50 exhibitors are expected to attend the event in Bergen, Norway 8 – 9 June 2011. Delegates at UTC are executives, managers, engineers and other strategic and planning personnel related to the subsea field of the petroleum industry.

The UTC is hosted by The Underwater Technology Foundation (UTF). The UTF was set up during the pioneering period of the Norwegian petroleum era and arranged the first Underwater Technology Conference in 1980. The organization was formed by a group of key companies in the oil industry, in cooperation with classification, research and finance institutions in the Bergen area.

We welcome you to Bergen 8 - 9 June 2011!
